

DIFFERENTIAL EQUATIONS

St. Olaf College • Math 230

Dr. Matthew Wright • Spring 2016

Text: *Differential Equations*, 4th Edition, by Blanchard, Devaney, and Hall

Meeting Times:

Math 230A: Tuesday 8:00 – 9:25am and Thursday 8:00 – 9:20am

Math 230B: Tuesday 11:45am – 1:10pm and Thursday 12:45 – 2:05pm

Location: Regents 204

Office Hours: M 1–2, T 2–3, W 9–10, Th 9:30–10:30, F 1–2; or by appointment in RMS 409

Contact info: wright5@stolaf.edu

Web Site

The course web site is:

<http://math230.mlwright.org/>

You will refer to this web site frequently for homework assignments and course files.

Course Objectives

1. To demonstrate how differential equations model real world phenomena.
2. To investigate different techniques for finding, analyzing, and visualizing solutions to differential equations, and to understand their long-term behavior.
3. To thoroughly understand the behavior of linear systems and what they imply about nonlinear systems.
4. To use computational tools such, as *Mathematica*, to find approximate solutions to differential equations.

Grading

Your final grade will be a weighted average of the following:

Homework:	25%
Lab assignments:	10%
Exams:	40% (20% for each of two exams)
Final Exam:	25%

Homework

Homework will be assigned nearly every class day. *Keeping up with the homework is important, not only to get a good grade, but also for mastering the course material!* The proper way to work on a homework problem is as follows:

1. Read and attempt to understand the problem, looking up definitions or theorems if necessary.
2. Make a plan for solving the problem.
3. Attempt to carry out the plan. Revise the plan. Spend time thinking about the problem.
4. If you have spent significant time on the problem and still can't solve it, then talk to Dr. Wright or another student who is struggling with the same problem. Then go back to step 2.

5. If you think you have solved the problem, then check your answer. Ask yourself, “Is my answer reasonable? Can I verify it in some way?” See if you can improve your solution.
6. Write your solution neatly and thoroughly.

Collaboration on homework is encouraged (see #4 above), but *you must hand in your own work*. For full credit, explain your solutions clearly and *show all work*.

Homework will be due in the homework mailbox at 4pm on the due date. Late work will *not* be accepted in general. However, your lowest homework grade will be dropped.

Lab Assignments

Lab assignments will involve numerical experimentation and use of technology beyond what is required for the regular homework problems. In addition, these assignments will require you to explain your work in writing, which is an important part of the learning process. There will be approximately four lab assignments throughout the semester.

Exams

This course will have three exams, including the final exam. Plan to be present at each exam. Make-up exams will be given only in circumstances that are truly exceptional, and must be arranged in advance. In particular, travel plans are not a valid excuse to miss an exam.

Exam 1: Thursday, March 10 on Chapters 1 and 2

Exam 2: Thursday, April 21 on Chapters 3 and 4

Final Exam: cumulative, roughly on Chapters 1 – 6

Math 230A: Monday, May 23, 9:00 – 11:00am

Math 230B: Thursday, May 19, 2:00 – 4:00pm

Strategies for Success

- Attend class faithfully and take good notes.
- Read the sections in the textbook corresponding to each class.
- Keep up with the homework. Avoid doing the entire assignment the night before it is due.
- Practice is essential for learning mathematics! Work each problem carefully and thoroughly.
- If you are having trouble, seek help! Dr. Wright is happy to talk to you.

Academic Integrity

Claiming someone else’s work as your own will earn you a failing grade on the work in question. Don’t do it. For more information, see the *Academic Integrity* section of *The Book*.

Disability and Access

Dr. Wright is committed to supporting the learning of all students. If you have already registered with Disability and Access (DAC) and have your letter of accommodations, please meet with the professor early in the course to discuss, plan, and implement your accommodations in the course. If you have or think you have a disability please contact the Disability and Access office at 507-786-3288 or wp.stolaf.edu/asc/dac.
