## Polyhedral Investigation

Math 282 Computational Geometry
For some of your favorite polyhedra, compute

$$
V-E+F
$$

where $V$ is the number of vertices, $E$ is the number of edges, and $F$ is the number of faces.

1. Let $P$ be a polyhedron of genus zero. If every face of $P$ is either a pentagon or a hexagon, and if the degree of each vertex is 3 , then how many faces are pentagons?
2. Let $P$ be a polyhedron of genus zero. If every face of $P$ is a traingle and the degree of each vertex is either 5 or 6 , then how many vertices have degree 5 ?
